LUMINAX X-21 SURGICAL X-RAY UNIT

VARIMEX

„LUMINAX X-21” with image intensifier and Television is designed for use in operating theatres or at the patient's bed, especially for:

- Quick radiosopic inspection of fractures
- Checking and guiding: probes and catheters being introduced, injections of contrast agents, nailing, implantations and punctures
- Localization of foreign bodies.

The unit comprises mobile X-ray apparatus with image intensifier of usable diameter of 190 mm.

The cassette mounting on the intensifier permits to take radiographs using standard cassette.

X-Ray television allows to perform X-ray examinations in not darkened rooms.

SPECIFICATION

— Mains voltage			220 V \pm 10 % — 50 c/s
— Output for radiography			44 — 100 kV, 0.25 — 3.0 mA stabilized
— Output for fluoroscopy			44 — 100 kV, 40 — 18 mA
— Time of exposure			0,1 — 8 sec
— Weight:	X-ray unit with image intensifier:	net	237 kg
	TV — monitor with cart	net	65 kg
— Cubature			2.5 m ³
